## Strong roots for sustainable growth

Since it was founded in 1879, Carl Roth GmbH + Co. KG has become a renowned expert in the fields of laboratory supplies, life science and chemicals. With over 140 years of tradition and experience, the company is one of the leading wholesalers in Europe and supplies customers in over 100 countries worldwide. Carl ROTH has its headquarters in Karlsruhe, from where it supplies its five European subsidiaries. The family business stands for continuity and the highest quality in supplying laboratories, scientific institutions and manufacturing companies.

## Variety, availability, reliability

Carl ROTH supplies its customers with high-quality products from an extensive range that currently numbers over 36,000 items. From laboratory chemicals to state-of-the-art laboratory equipment, the company offers a wide range of products that is regularly expanded and optimised for new applications. The product range is characterised by both high quality and fair prices, and current offers are quickly and flexibly adapted to urgent customer requirements. Carl ROTH's own products form an important part of the product range. These are the result of continuous, close and trusting cooperation with research projects as well as with specialised manufacturers worldwide. This innovative mix makes Carl ROTH a reliable partner for laboratories, scientific institutions and manufacturing companies in research, analytics and industry.

### Long-term partnerships built on day-to-day quality

At Carl ROTH, we cultivate open and appreciative cooperation and a high standard of quality. Scientific product experts and a competent sales team support customers with sound knowledge and many years of experience in order to find customised solutions for their specific questions, requirements and needs. This is complemented by a broad product selection based on many years of market and industry knowledge, professional advice, fast delivery, comprehensive service and Carl ROTH's clear commitment to sustainability.

### ROTH for future

In a social context, every company is asked to work towards a better future through sustainable solutions. Carl ROTH has accepted this challenge and, as a result, has firmly anchored sustainable thinking and action in its corporate philosophy. Examples of this can be found throughout the company, from production to the vehicle fleet, to the building stock and product range. For example, in our range of chemicals, 'green solvents' are increasingly complementing traditional, non-sustainable solvents and thus helping to minimise risk in customers' laboratories. Carl ROTH relies on renewable raw materials and environmentally friendly manufacturing processes, labelling corresponding products with the 'ROTH for Future' seal.

As we like to say at Carl ROTH: We apply 140 years of experience to shape the future for the benefit of all.
